When you're working with someone else's image, it's always smart to ask permission. Most of the time, people are flattered you want to use their image and eager to support you in your project. If you do get a negative response, ask to reschedule for another time. I've seen many photoshopped images completely ruined by someone trying to do the image justice while at the same time ruining the image. Don't press an image or a client if you can't get what you want out of it or your budget. Managing Files and File Types Photoshop has many different file formats for image files. These file formats include Tagged Image File Format (TIFF): Any Photoshop file that's in the.PSD file format, which includes tagged files and layered PSD files, uses TIFF as a format. Portable Network Graphics (PNG): A graphics file format that is popular due to its small file size, it includes a transparency layer to support fine-tuned clipping paths. It's the format that Photoshop uses when you save a file as a.PNG file. JPEG: A graphics file format that's popular due to its reduced file size, as well as its compression capabilities, it's the format used when you save a file as a.JPG file. GIF: A graphics file format that's popular due to its small file size, it's the format used when you save a file as a.GIF file. Some file types are native to Photoshop, while others are created specifically for Photoshop. The native file types for the programs that I list in this list are indicated by an icon in the program. PSD: Photostock-ready device (PSD) files are any Photoshop files that follow the guidelines Adobe makes for layers (chapters 14 and 15). Adobe Photoshop has two types of PSD files, and either one of them can be used in a web design project for any file type. AI: Adobe Illustrator is a vector graphics program. When you save a file as a.AI file, it creates a vector graphic. In other words, vector graphics are a two-dimensional design that you can resize, change, or convert into any type of image, including a photograph, logo, or any other logo. EPS: The.EPS file format is created by Adobe Illustrator. EPS files can contain text and shapes. An EPS file holds the

Peter Galvin, who was a key figure in the creation of the National School of Ireland (Nis) in 1965, has passed away. His life and work have been well documented (e.g., K. M. Burke, Nis: The Making of a College, Blackstaff Press, Dublin 1997; B. Sutton, What's theUseof College, Blackstaff Press, Dublin 2002; A. McCourt, Nis: History and Hope, Blackstaff Press, Dublin 2003) and his connection with Nis and the progressive school movement is well known. Nis is now the subject of an Irish Studies Centenary Conference to be held at University College Dublin in September 2005. For this meeting this website has been created to provide a place for articles about Peter Galvin and the history of the National School of Ireland to be published as well as an online edition of the Nis Journal which is published by the Nis Society. This site will also provide a forum for Nis scholars working in the humanities and social sciences to interact as well as maintain an up to date record of publications and Nis-related research. Please post any comments or questions for the site's administrator, Liam Clarke.[Ezetimibe--pathophysiologic considerations and effect on LDL-cholesterol]. Ezetimibe is the newest of the three 3-hydroxy-3-methylglutaryl coenzyme A reductase (HMG-CoA-reductase) inhibitors available in Germany. It is in pharmacologic combination with other statins in the treatment of hyperlipidaemia and mixed hyperlipidaemia. Ezetimibe is already approved for clinical use in the USA. The megalin receptor for thyroid hormones, as well as a number of other ligands for the macrophage scavenger receptor, are part of a group of proteins known as the low-density lipoprotein (LDL) receptors. To maintain cellular cholesterol homeostasis, LDL receptors mediate the uptake of LDL from the blood by the liver and peripheral cells. By binding to the megalin receptor, ezetimibe prevents the recycling of endocytosed LDL to the cell plasma membrane where it is proteolytically degraded by the lysosomes. Ezetimibe lowers LDL-cholesterol because it inhibits the endocytosis of LDL through the megalin receptor. Several clinical trials with ezetimibe have documented its cholesterol-
